

1300kg Trailer

Braked Portable Signal Trailer

Our 1300kg braked trailer is designed to carry both Micro and RadioMaster traffic lights, offering greater flexibility. The low bed height makes loading signals safe and simple via the assisted easy lift ramp tail, and signals are secured in place using a Varidoc frame system. It features rear prop stands to support unloading and a single axle design with an auto-reverse braking system.

The trailer comes with full LED lighting system and rear reflective chevron panel.

FEATURES

- Carries 6 Micro or 4 RadioMaster signals
- Safe, secure and simple to use
- Full LED lighting system and reflective chevrons
