

Built-in Charger

Integrated Base Unit Charger

Designed to fit into the Micro and RadioMaster base units, the two styles of battery charger are designed to accommodate the number of batteries in each unit. They are normally installed at point of manufacturer or may be installed as an upgrade.

An external power socket allows the batteries to be charged in the bases when back in the depot, reducing manual handling and ensuring the correct batteries remain within the signal, resulting in more reliable performance and prolonged battery life.

FEATURES

- Upgrade for Micro and RadioMaster signals
- Ensures safe and reliable charging
- Reduces manual handling of batteries
