Evo UTC

Wireless UTC Connectivity

The first wireless*, radio-linked solution for portable urban traffic control. Evo® UTC targets the need for a better connected and secure traffic control system for urban applications. Our UTC controller integrates with existing UTC networks, allowing local authorities to remotely control signal timings on portable installations.

The UTC controller is fully configured and delivered through our **FleetAssist** service.
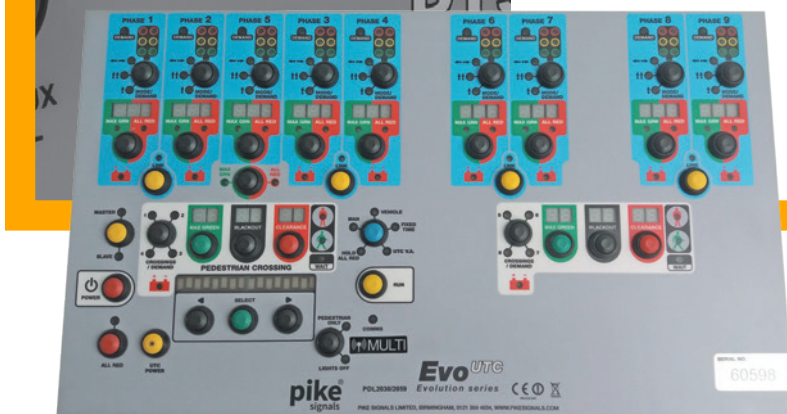

APPLICATIONS

🚗 Traffic   🚶 Pedestrian

FEATURES

• The only wireless, radio-linked solution for portable UTC
• Up to 34 heads, 9 traffic phases and 8 pedestrian crossings
• ADSL cable or 3G/4G wireless signal connection
• Compatible with non-UTC controllers
• Single or dual panel options available

*Wireless UTC is held under Patent GB2534294
